OBJECTIVE

Computer Science graduate (CGPA 8.35, 2026) seeking a Software Development Engineer I role where I can write clean Python code and apply my strengths in data structures, algorithms, object-oriented design, and relational databases. I have used Git on every project, work well in teams, and enjoy breaking down loosely defined problems and debugging them methodically in an agile environment.

EDUCATION

B.E. in Computer Science & Engineering, Alva's Institute of Engineering and Technology, Mangalore 2022 – 2026
CGPA: 8.35

Karnataka Board PUE (Science), Sri Adichunchanagiri Independent PU College, Shivamogga 2020 – 2022
81.33%

Secondary School Leaving Certificate, Stella Maris High School, Honnali 2019 – 2020
85.44%

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL (Oracle SQL, MySQL), HTML, CSS
Programming & Software Engineering: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Software Design Principles, Debugging and Troubleshooting, Writing Clean and Maintainable Code, Agile Development, Code Reviews
Database Management: Oracle SQL, MySQL, MongoDB
Libraries / Frameworks: Scikit-learn, TensorFlow, Pandas, NumPy
Tools: Git, GitHub, VS Code, Google Colab, Oracle SQL*Plus
Other Concepts: Machine Learning, NLP, CNN, Data Preprocessing, Explainable AI

INTERNSHIP

Data Science Intern, Prinston Smart Engineers

- Reviewed the existing data pipeline, found a few inefficiencies, suggested code-level fixes, and documented the changes for the team.
- Cleaned and preprocessed real-world datasets in Python, handling missing values, encoding, and feature scaling before building models.
- Built and tested Logistic Regression, Decision Tree, and Random Forest models for prediction tasks, and debugged cases where outputs were inconsistent with expectations.

PROJECTS

Loan Approval Prediction using Machine Learning + LLM, *Python, Scikit-learn, LLM API, Git*

- Designed an object-oriented Python pipeline that reached 90–96% accuracy across three algorithms, and worked through several ambiguous prediction cases by debugging the logic step by step.
- Structured the code into reusable, maintainable modules so applicant details could be run through the pipeline and return a prediction with reasoning instantly.
- Connected an LLM API (Groq) so the model could explain approval and rejection decisions in plain English, making the results easier to trust.
- Checked model quality with confusion matrix, precision, recall, and F1-score, and tracked all changes with Git as the project evolved.

AI Model for Automated Content Moderation, *NLP, CNN, MongoDB, Python*

- Built a system that combines NLP and image processing to flag offensive content in both text and images, keeping the two pipelines as separate, testable modules.
- Used NLP techniques to catch toxic, abusive, and hate speech in user-generated text.
- Trained CNN models to pick out explicit imagery, violence, and hate symbols in images, and debugged several rounds of misclassifications through iterative testing.
- Analyzed mislabeled examples to find failure patterns and rewrote the annotation guidelines to cut down on labeling errors.

ACHIEVEMENTS

- Certified in Data Structures and Algorithms using Java, Infosys Springboard.
- Recognised for developing 'Smart Tour Guide Expense Splitter' at SAP Hack Feast, MITTE Engineering College, Mangalore.
- Represented Honnali Division in Badminton at the 2018 District-Level Meet, Davanagere; volunteered at the International Cultural Jamboree, a global Scouting event.
